

Fascinating new articles!

Greetings!

We are pleased to present two new articles on the R.D. Pike Building project! The first is a historical recap of how fish eggs were sourced and transported in the early 1900's. The amazing ingenuity that went into the process, and the detective work to find this out are all included! The second article covers our current work to renovate the building and the cherished technical donation assistance we received from the UWM-SARUP architecture school.

Meet the Nickersons!

The Trains Ran on Time

Back in January of 1905, the Bayfield Fish Hatchery needed trout eggs. They found them alright- in Massachusetts! How did they know? How did they get them? What had to happen to make this possible? Read the remarkable tale here!

Architecture to the Rescue!

Students helping to Reawaken History!

What an honor to be selected by the University of Wisconsin Milwaukee's architecture program! We think you will be as delighted to read this as we were to receive the honor!
